(54) HOT-LINE  
INSERTION/EXTRACTION  
SYSTEM

(57) Abstract:

PURPOSE: To insert/extract a board with minimum burden for a system when the exchange of the board is required in the information processing system.

CONSTITUTION: The board 7 can be extracted by providing means (8 and 9) supplying power source independent for respective boards and cutting the power source of the board concerned after a switch device 8 logically detaches the board. Then the board 7 can be inserted by means 2, 4 and 5 which logically connect the power source of the board after the switch device 8 supplies power source. Thus, the board 7 can be inserted/extracted with minimum burden to the system.
